

Sanam Kheirieh, DDS, MS

Dr. Sanam was gifted with precision. As a kid, a paint brush was often found in her hand. At the same time, her mother worked as a medical school faculty where she was introduced to the field of medicine. It was years later, while working in an endodontic research center, where these passions would blend together.

"I became fascinated by the specialty's precision, attention to detail, fine motor skills, and developing patient relationships," shared Dr. Sanam.

Today, as a traveling endodontist, she brings specialized endodontic care directly to dental practices and the communities they serve. "Most importantly, I love relieving pain and treating disease at its source. Knowing that timely treatment can support a patient's overall health continues to motivate me."

She spends her days working closely with general dentists and other specialists to make the best informed decisions for patient care. "Together, we utilize all appropriate diagnostics, including CT imaging, and exhaust every reasonable option to preserve the natural tooth."

She shared, "This collaborative model provides patients with greater convenience, accessibility, and continuity of care all in one location." She's witnessed firsthand the benefits her patients experience when receiving care in the comfort of their dental office.

As the field shifts to focus more on proactive care, Dr. Sanam leverages new technologies to promote lifelong oral health. "CBCT imaging and use of microscopes are key advancements in Endodontics; these can help identify, diagnose and treat with more precision."

Outside of dentistry, spending time with her husband and daughter brings her the most joy. The artistic abilities didn't stop at Dr. Sanam. Her daughter also loves to color and paint, it's become a bond the two share deeply.
